We have researched and developed a line of new-generation, perfume-grade fragrances, which embody the art of perfumery. A successful fragrance is like symphony: the top notes capture our curiosity and attention and draw us to the middle notes which capture our soul, the base notes linger in our olfactory memory and tie us inextricably to that scent.

### PRECAUTIONS FOR USE:

In order to prevent contamination when changing the perfume inside the diffuser, it is necessary to:

- Completely empty the reservoir so there is no perfume left inside

- Rinse the reservoir at least two times with an alcohol-based product (Such as FS ISOSAN RTU)
- Rinse with water to remove residues
- Let the reservoir dry for a few minutes
- Fill it with the new fragrance

### DIFFUSERS

Our fragrance diffusers use the latest "DRY VAPOUR" technology, which optimises fragrance consumption and maximises the yield. Durable, reliable and easy to programme. They can fit all room sizes and all requirements: from "stand-alone" to applications through air conditioning ducts.

*All information in this document is based on our practical experience and/or laboratory tests. Due to the multiplicity of conditions for usage and variable human factors, we recommend that you always test our products for suitability prior to use. At any time, this version of the product specification report may have been revised based on legislation, availability of the individual ingredients or newly acquired information. The current approved version is available upon request.*
